Product datasheet

Ion Sensitive Field Effect Transistor (ISFET)

Winsense ISFET pH Sensor (WIPS)

Special Features:
- \( \text{Si}_3\text{N}_4 \) (Silicon Nitride) Insulating gate
- Operates as a MOSFET at a constant voltage \( V_{ds} \) current \( I_{ds} \)
- Quality control by predetermined electrical measurement cycle after packaging
- Single supply, low power, small size

Product Description:
Sensing principle:
The sensitive element is a Field Effect Transistor; whose metal gate is replaced by a Reference Electrode and the solution of interest.

The ISFET devices are realized with microelectronic technology compatible with CMOS processes.

- \( \text{Si}_3\text{N}_4 \) insulating gate ISFET devices measure the pH value in a wide range from basic to acidic solutions

Applications:
- Smart farming
- Water Quality monitoring
- Environment control
- Security, industrial process control

Interface electronics:
- Analog read out circuit with output 1-2 V.

Characteristics
Input/Outputs:
- Bias condition: \( V_{ds}=0.3 \) V
  \( I_{ds}=25-35 \) uA
- Output: Analog voltage 1-2 V

Base structure
- Sensor base materials: Silicon, Silicon nitride, Silicon dioxide
- Technology: 6” planar CMOS process

Selective membrane
- pH-sensitive material: \( \text{Si}_3\text{N}_4 \)

**Graphs:**

1. **Graph 1:**
   - pH level (pH) vs. Output Gate voltage (V)
   - Equation: \( f(x) = 0.05226667x + 0.60924000 \)
   - \( R^2 = 0.99999993 \)

2. **Graph 2:**
   - Temperature (°C) vs. Gate Output Voltage (V)
   - pH 4: \( f(x) = -0.0021504x + 0.871481 \)
   - \( R^2 = 0.9993457795 \)
   - pH 7: \( f(x) = -0.0018496x + 1.022129 \)
   - \( R^2 = 0.9986625299 \)
   - pH 10: \( f(x) = -0.001293x + 1.16375 \)
   - \( R^2 = 0.9947732795 \)
**pH Sensor Specifications**

- **Sensitivity:** 50 mV/pH
- **Range:** pH 2 - pH 12
- **Accuracy:** 0.01 pH
- **Operating temperature:** 0°C - 100°C
- **Response time:** 10 s

**Temperature Sensor Characteristics**

- **Temperature Sensor Diode:**

  ![Graph showing temperature vs. output voltage](image)

  \[ f(x) = -2.9300x + 435.4900 \]

  \[ R^2 = 0.9984 \]

**Temperature Sensor Specifications**

- **Sensitivity:** -2.93 mV/degC
- **Range:** 0 - 100°C
- **Response time:** 1s

**Sensor terminals and connections:**

Chip connections and connections of packaged sensor:

From top to bottom:

1. ISFET chip
2. Temperature (left) and ISFET (right) chips wire bonded on a PCB
3. Temperature (left) and ISFET (right) chips wire bonded on another PCB with shorter wiring
4. ISFET wire bonded to PCB after encapsulation

Reference-electrode

For stable measurements an Ag/AgCl Reference electrode is required. Submerged together with the packaged ISFET chip, it acts as metal gate electrode and provides a stable reference potential.
WIPS Control Electronic

Measurement circuit:

Operating mode:
Principle: The circuit configuration is used to keep a constant drain current ($I_{ds}$) and voltage ($V_{fs}$) for the ISFET operation providing an output voltage ($V_{g}$) linearly depending on pH level of the solution under test.

Recommended Handling and Operating Conditions:
- The ISFET is sensitive to light, it is then preferably operated out of direct light as calibration is normally performed in dark.

Important precautions:
- Avoid any electrostatic discharge at the ISFET connections when handling in dry air
- Store the Ref Electrode in KCl solution when not in use.
